AI-Powered Antibody Discovery

Unlocking High-Throughput Biology and Drug Discovery

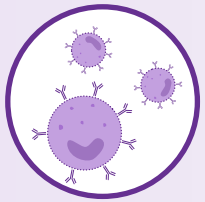
May 2023

Antibody Discovery Tech Stack: Precision-Targeted Antibodies with Lower Downstream Risk

1 **Engineered Epitope**
Design Engine

- Patented* epitope engineering
- AI-engineered epitope preserves target structure

2 **Human Diversity**
Antibody Library



- Human antibody diversity
- Clinically validated frameworks
- Benchmarked vs. competitive libraries

3 **StableHu™**
Antibody Optimizer

- Functional antibody enriched mammalian-display library
- Faster human sequence and optimization vs. traditional methods

Multiple validations with difficult targets and MoAs

Epitope-Targeted Antibody Discovery

Therapeutic Antibody Efficacy Depends Heavily on the Epitope

Epitope-specific antibody discovery is hindered by:

- Dominant-epitope, low/no efficacy antibodies inundate traditional discovery approaches[1, 2, 3]
- Low/zero discovery yield for high-value, challenging therapeutic epitopes[4]
- Limited availability of epitope-stabilizing immunogen scaffolds for epitope grafting[5]

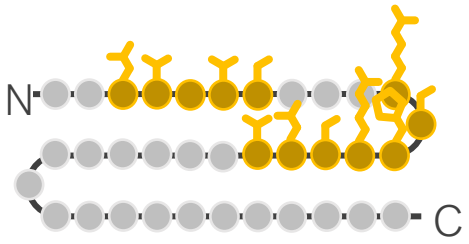
D: -3.5	N: -3.5	K: -3.9	R: -4.5

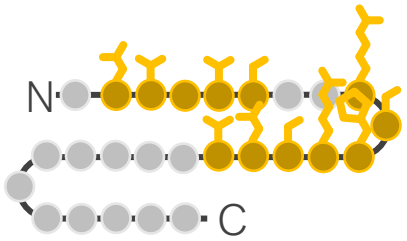
Average hydropathy is minimized

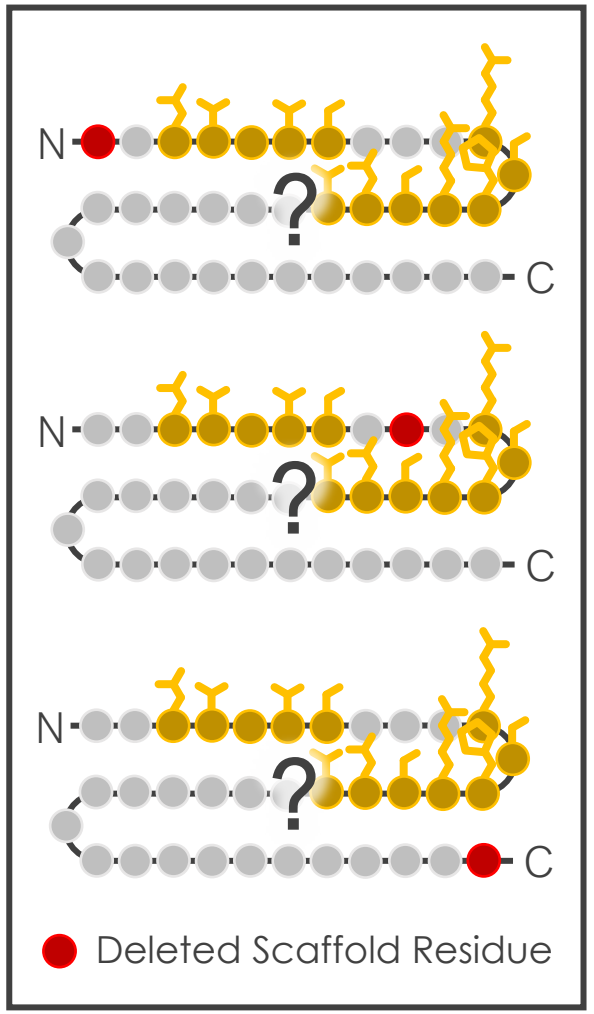
Engineered Epitopes are Further Optimized by Maximizing the Epitope-to-Scaffold Ratio to Reduce Scaffold-Specific Antibodies

Starting Topology = $\frac{\#\text{Epitope residues}}{\#\text{Scaffold residues}}$



Optimized Topology = $\frac{\#\text{Epitope residues}}{(\#\text{Scaffold} - \#\text{Deleted})}$





Iteratively trim scaffold residues until epitope destabilizes

Engineered Epitopes are Designed with the AI-Engine and Cross Validated with Folding Simulations, Binding Measurements, T_m, and NMR

Conclusions

AI Combined with HT-Screening Can Efficiently Discover Traditionally-Challenging Antibodies

AI-engineered epitope steering facilitates next-gen antibody targets:

- Challenging targets and MOAs
- Per-epitope target biology exploration

AI-generated fully-human antibody libraries reduce downstream risks:

- Improved sequence humanness
- Broad sequence and activity hit set from a template

HT-screening with SPR and flow cytometry enhances AI development:

- Kinetic & affinity dimensions for AI model training and hit selection
- Data scale for AI model refinement & development

Thank You
